

# What Makes **Cobots** Right For You?

## What are Cobots?

Collaborative Robots (Cobots) were created to work collaboratively amongst humans instead within their own safe-guarded real estate. They are designed for all those dull, dirty, and/or dangerous tasks where humans will usually face very boring or dangerous challenges. Excelling in these types of applications, Cobots can help you avoid costly repetitive, strain, and other kinds of high-risk injuries. Once integrated into your operations Cobots could be able to increase production, perhaps by running overnight.

Adding Cobots to your work environment could help build a safer and more profitable business.

## The Most Important question:

- Are your parts less than 16kg? If so, Cobots could be the right solution for you!

## Important Considerations:

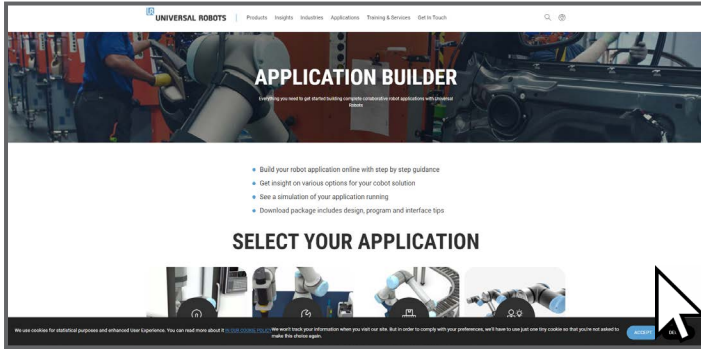

- Are the cobots going to be working closely with people?
- What type of parts are the Cobots going to be processing?
- How much room do you have for a robot cell?
- Will the Cobot be linking to other machines?

### What is a Robotic Cell?

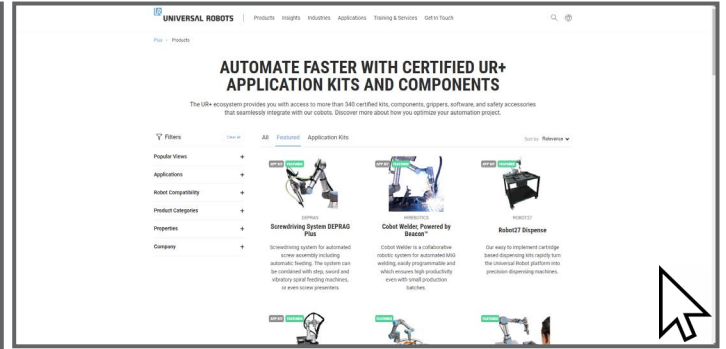

A robot or a set of robots which are organized within a workspace.
