

Control Panel for chicken wings diverter

Customer Pain:

This client came to us looking for a full control panel and cylinder system, which needed to be wired right out of the box. Initially, they were only looking for parts; however, after discussing their pain with us, they determined a custom solution from SKEANS would be best.

This control panel would be designed for a brand-new application, and the client wasn't sure how they were going to mount it or which cylinder solution would be for them. After inviting us to review the site, they determined the most important aspect would be not only a cost-effective solution but also something compact enough to fit within the existing environment. Lastly, being that this was a food-safe environment, it was key that the final solution would be water-resistant and washdown capable.

Solution:

For this solution, our SKEANS Value-Added team took it upon themselves to build a custom control box for the client. This control box utilized various components from NEMA with their 4x certification. This certification made them water-resistant and washdown capable. Once completed, this new system would be fully ready to wire into the existing environment.

Results:

The final result was a solution with allowed the client to save a large amount of time and resources during installation. Additionally, this cost-effective solution was custom built for them and their environment, which saved them the time and resources that could have been spent designing it in house.
