

Food & Beverage Compressor Upgrade

Customer Pain:

A client came to us looking to replace their two old piston machines, which was no longer getting the job done. Their new solution needed to be much quieter, have little to no maintenance, and use zero oil in a food-safe environment.

Noise reduction was especially important as the older machines had been linked to hearing-related injuries in the workplace..

Solution:

After visiting the site and reviewing the old machines, our team determined that a Rotary Scroll compressor would be the best solution for the client. This Rotary Scroll compressor is much quieter at 71 decibels, maintenance-free due to its flexible and modular design, and completely oil-free making it perfect for a food-safe environment.

Additionally, as a bonus, this solution would also allow continuous operation.

Results:

With this solution, the client has not had any noise-related injuries reported, thus making their new compressor much safer for the work environment. Additionally, with minimal maintenance and an oil-free solution, their new rotary scroll compressor has helped them avoid any costly shutdowns and maintenance.
