

## Woodworking

Every wood product business, no matter the specific product or final operation, can benefit from the use of rotary vane compressors. OEMs working with wood products, furniture manufacturers, construction companies, millwork operations, and so many more rely on compressed air provided by rotary vane compressors. They assist in the use of air-operated tools, which are lighter and easier to operate than electrically-operated tools, which reduces labor time and allows jobs to be completed faster. They are also the most reliable, effective way to ensure accurate painting and finishing of wood products.

No matter the size or specific role of the woodworking task, rotary vane compressors deliver the energy- and cost-savings that keep these businesses running smoothly and profitably. They ensure accuracy the way no other compressor can, and make any woodworking operation more efficient.

### Mattei Product Recommendation for Woodworking Applications:

#### Good Option: ERC Series

#### Better Option: AC Series

#### Best Option: Optima Series or Maxima Series

Learn more Mattei's [Optima Series](#) and [Maxima Series](#) and how these systems can benefit woodworking applications.
